

All the following are true of bupivacaine EXCEPT:

- a) It is more lipid soluble than lignocaine and hence more potent than lignocaine
- b) Binds extensively to proteins
- c) Pain and temperature nerves (delta fibres) are more sensitive to blockage than postganglionic sympathetic fibres
- d) Has a greater cardiac toxicity than Ropivacaine
- e) Toxicity can be reduced by co-administration of adrenaline

Thiopentone; Which one is true?

- a) Has a pH of 5.5.
- b) Has a $T_{1/2\beta}$ of 5 min.
- c) Phentobarbital is a metabolite.
- d) 5% is excreted unchanged in the urine.
- e) The rectal dose is approximately double the IV dose.

Propofol: All the following are true except:

- a) Clearance is greater than hepatic blood flow.
- b) Causes less drop in B.P. than thiopentone
- c) Has no proarrhythmic effects
- d) Causes pain on injection
- e) Inhibits the laryngeal reflexes
